

# Training Day 3 Report:

13 June 2024

## Key Takeways

- **Hands-on Exercise on Navbar:**

- Practiced creating a responsive navigation bar using HTML and CSS.
- Implemented various styles for the navigation links including hover effects.
- Ensured that the navigation bar is functional and visually appealing across different screen sizes.
- Key skills learned: Flexbox for layout, CSS transitions for hover effects, and making the navbar responsive.

- **Hands-on Exercise on Fluid Concept:**

- Gained practical experience with fluid design concepts to ensure website elements adapt to different screen sizes.
- Utilized percentage-based widths and heights to create a flexible layout.
- Ensured that the content within containers remains proportionate when the viewport size changes.
- Key skills learned: Using CSS properties like `width: 100%`, `max-width`, and understanding the principles of fluid design.

- **Making Website According to Given Statements:**

- Followed specific design instructions to create a webpage layout.
- Created sections with specific styling, including a header, main content area, and multiple image sections.
- Implemented a black block section with centered text and a button.
- Structured the HTML and applied CSS to ensure the webpage matches the provided design requirements.

- Key skills learned: HTML structuring, CSS styling, Flexbox for layout management, and implementing design specifications accurately.
